(54) Title: **METHOD AND APPARATUS FOR WRITING AN OPTICAL DISC**

(57) Abstract: The present invention provides a method and apparatus for writing an optical disc. By means of storing the control information of the program obtained in one or more optical disc writing processes onto the optical disc or the assigned area of the writing means, converting the control information into control information compliant to a standard after finishing writing and storing control information compliant to a standard onto the optical disc. The present invention builds a friendly interface, overcomes the compatibility of standard and the interface designing problems brought about by the randomness of writing an optical disc, especially the real-time writing.
